Surf the New Wave in Portable Fiber Optic Spectrometry

BLUE-Wave Miniature Fiber Optic Spectrometers for UV-VIS-NIR & OEM

The StellarNet BLUE-Wave Spectrometers are fiber optic coupled instruments with a wide selection of models for measurements in 190-1150nm wavelength ranges using a 16-bit digitizer via high speed USB-2.

Each unit contains a USB-2 interface with a snapshot memory to provide instantaneous spectral image from the highly sensitive CCD or CMOS detectors with 2048 elements. Various models provide a choice of grating range and slit resolutions.

A single strand fiber optic cable or probe assembly delivers input via standard SMA 905 fiber optic connector with a choice of cable lengths. The spectrograph optics are exceptionally robust in a vibration tolerant modular design, with no moving parts. The detachable spectrograph assembly and

BLUE-Wave 16-bit USB2 Spectrometers

LED spectra of red, green, blue, white

control electronics are protected inside a rugged metal enclosure, suitable for portable, process, and lab applications. Several units may be daisy-chained using a powered USB2 hub allowing simple configurations for dual and multi-beam applications in chemistry, spectro-radiometry, PORTA-LIBS, and industrial process controls.

The SpectraWiz software is included to accurately measure light emission intensity for LED, Laser, plasma, solar, xenon, and so on. Measurement applications include SpectroRadiometry (NIST traceable intensities, LED xy chromaticity), Spectro-Colorimetry (CIELAB L* a* b*), Chemistry concentration/reaction time analysis, UVabc monitors, Spectral-ID of elemental plasma emissions, and more.

Specifications		BLUE-Wave Spectrometers	
Dynamic range:	2000:1 with 6 decades	Dimensions:	1x3x5 inch = 25x75x125mm
Optical resolution:	see model table - to 0.2nm	Weight:	14 ounces
Detector type:	CCD or CMOS	Power consumption:	< 100 mA via USB port
Detector range:	200-1150nm (UV - add \$)	Interface:	USB-2 or USB-2 Hub
Pixel size:	14 x 200um or 7 x 200um	Detector Integration:	1ms to 65s
Diffraction Gratings:	Holographic & Ruled	Slit size options:	14, 25, 50, 100, 200um
Grating g/mm:	300, 600,1200,1800, 2400	Stray light:	<.1% at 435nm;<.05% at 600nm
Spectrograph:	f/4, SymX-Czerny-Turner	Fiber optic input:	SMA905 0.22na single fiber
Order sorting filters:	Integrated & High Pass	Operating systems:	Windows
Signal to noise:	1000:1	Software included:	SpectraWiz program & apps
Digitizer:	16-bit	Also free programs for:	LabView,Excel+VBA,Delphi

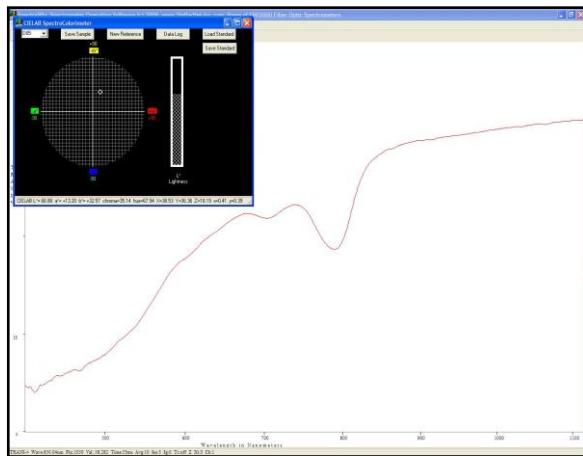

BLUE-Wave Miniature Fiber Optic Spectrometers for UV-VIS-NIR & OEM

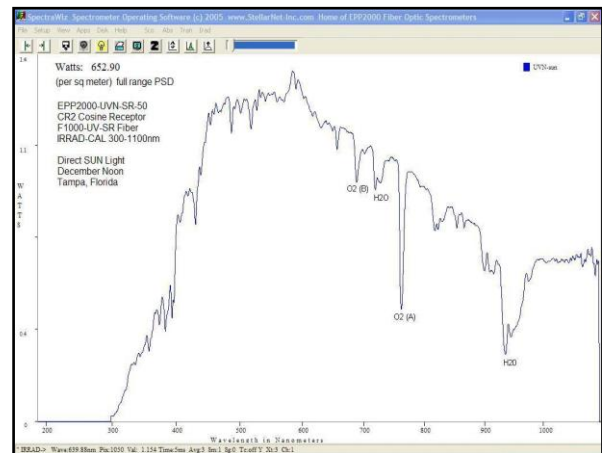

Additional measurement applications include emission wavelength monitoring /characterization of tunable lasers or LED's and other sources such as elemental emissions from plasma & Laser Induced Breakdown Spectroscopy. Also Bragg grating technology enables optical sensing of many

parameters including temperature and pressure. Thin film thickness measurements can be made using sample specular reflectance. The small size and weight makes the BLUE-Wave spectrometers just perfect for portable and OEM applications.

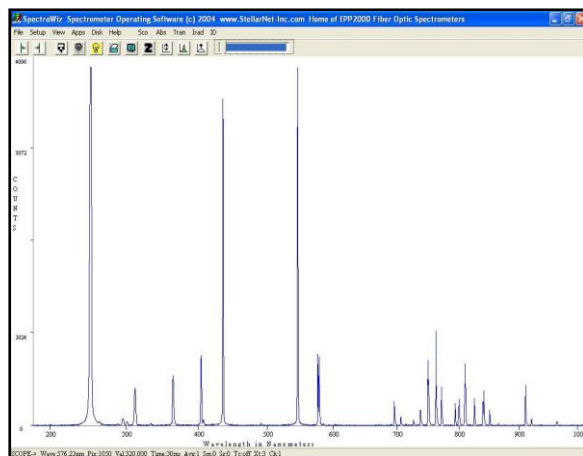

Model	Wavelength Range in nm	Grating g/mm	2048 pixel CCD detector		Predicted Slit Resolving Resolutions		
			Slit-200 nm res.	Slit-100 nm res.	Slit-50 nm res.	Slit-25 nm res.	Slit-14 nm res.
UV	200-600	1200	3.0	1.6	0.8	0.50	0.40
UV2	200-400	2400	1.5	0.8	0.4	0.25	0.20
UV3	220-350	3600	1.0	0.5	0.25	0.16	0.13
UVIS	300-1100	600	6.0	3.2	1.6	1.00	0.80
VIS	350-1150	600	6.0	3.2	1.6	1.00	0.80
VIS2	380-780	1200	3.0	1.6	0.8	0.50	0.40
NIR	500-1150	600	6.0	3.2	1.6	1.00	0.80
NIR2	600-1000	1200	3.0	1.6	0.8	0.50	0.40
NIR2b	785-1150	1200	3.0	1.6	0.8	0.50	0.40
